**Mathios Refractories** develops, manufactures, and sells first class refractory products and customized lining solutions for all major industrial sectors. We offer a complete services portfolio, spanning from engineering, production and procurement to installation, maintenance and repair services. Every single step of refractory work, starting from the detailed design of refractory linings right through to the selection of raw materials, production and installation, is performed by highly skilled teams. Well-structured working practices and procedures, meticulous checks and tests, as well as effective quality management are standard elements of everything we do.

At Mathios Refractories we have built a track record of successful projects and partnerships. Being a world class refractory company, our objective is to offer solutions which maximize the value of our customers' heat and chemical processing equipment.

**Founded in 1890** and particularly after the acquisition of Ideal Refractories S.A. in 2006, Mathios Refractories has developed into one of the biggest production, commercial and construction units of its kind globally and the only one in Greece. The company has a worldwide customer base and a network of partners leading to exports to more than 50 countries, having hence built a significant and solid expertise.

Mathios Refractories is certified according to **EN ISO 9001-2015** for Research, Development, Production and Trading of Refractory, Anti-Acid, Insulating, Building Chemistry Construction Materials. Refractory, Anti-Acid and Building Constructions.

# Introduction

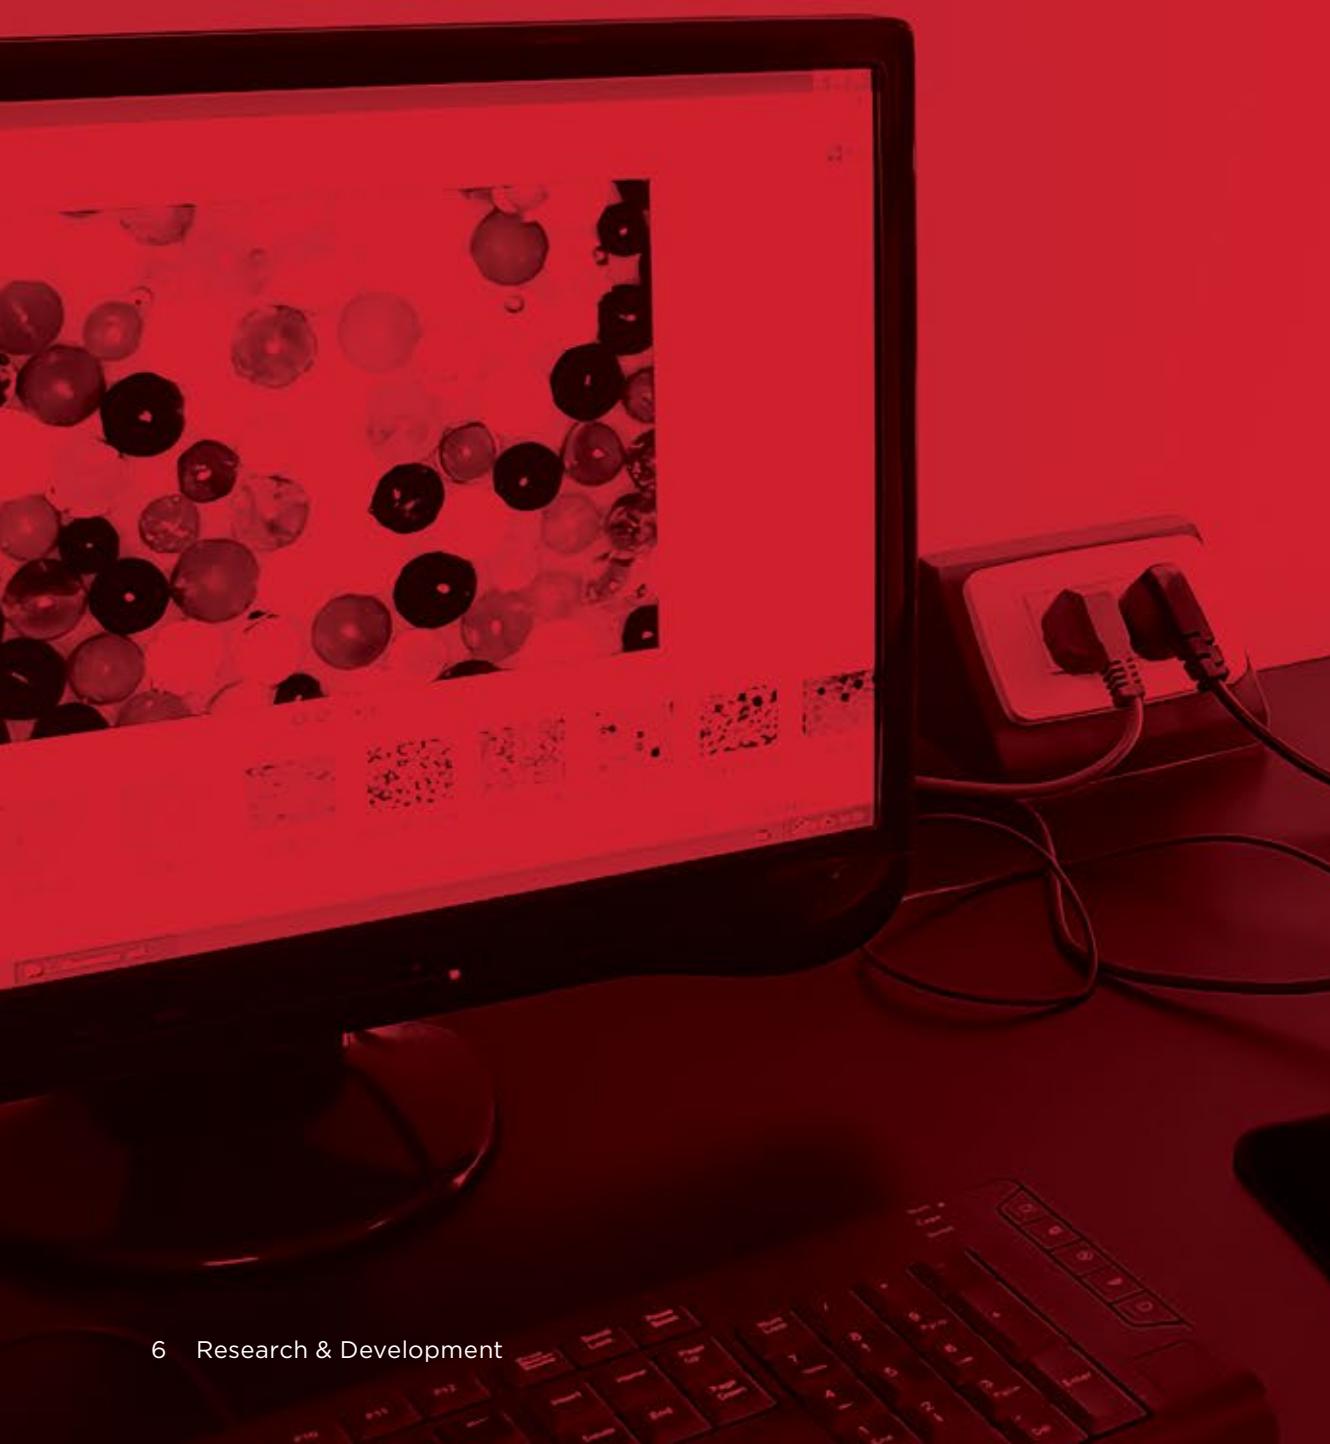

## Constant effort on product and methods development

As a forward-thinking and innovative company, Mathios Refractories continues to invest resources in research and development. Through using state-of-the-art-equipment, bringing in R&D technical experts and collaborating with key partners of various Industries and Universities, the company constantly evolves its products and solutions portfolios.

Experiments in lab environment, simulations and tests, pilot plant trials in different industrial sectors, post mortem analyses and exploitation of the most updated scientific knowledge are

some of the key things the R&D Department does in order to develop new and optimize existing products. Our trained Technical Department staff, our Customer Engagement Experts and the feedback we get from our Customers all play an important role in our innovation process.

Keeping ourselves abreast of the latest advances in the refractory technology and actively listening to our Customers, help us better understand their needs and come up with the next great product or solution.

# R&D

Research & Development

# Customized Refractory Solutions

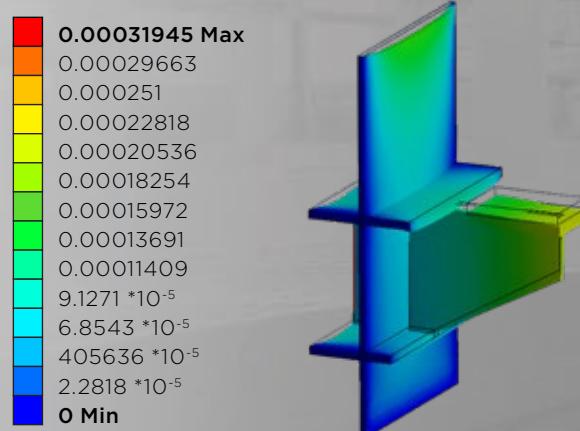

As we realize that every project is different, our engineering department offers tailor made solutions for each client according to its special requirements.

A group of highly competent and dedicated engineers will provide you with the optimal solution, both from technical and economical points of view.

All of the above is assisted by the use of modern and powerful software for 3D modelling, drafting, heat transfer calculations, project planning etc. Your refractory engineering needs is our passion.

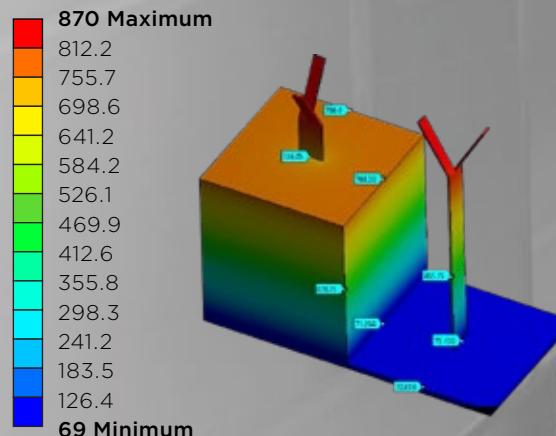

## **Hot gas recirculation duct support bracket static calculation.**

### Structural Static Deformation (mm)

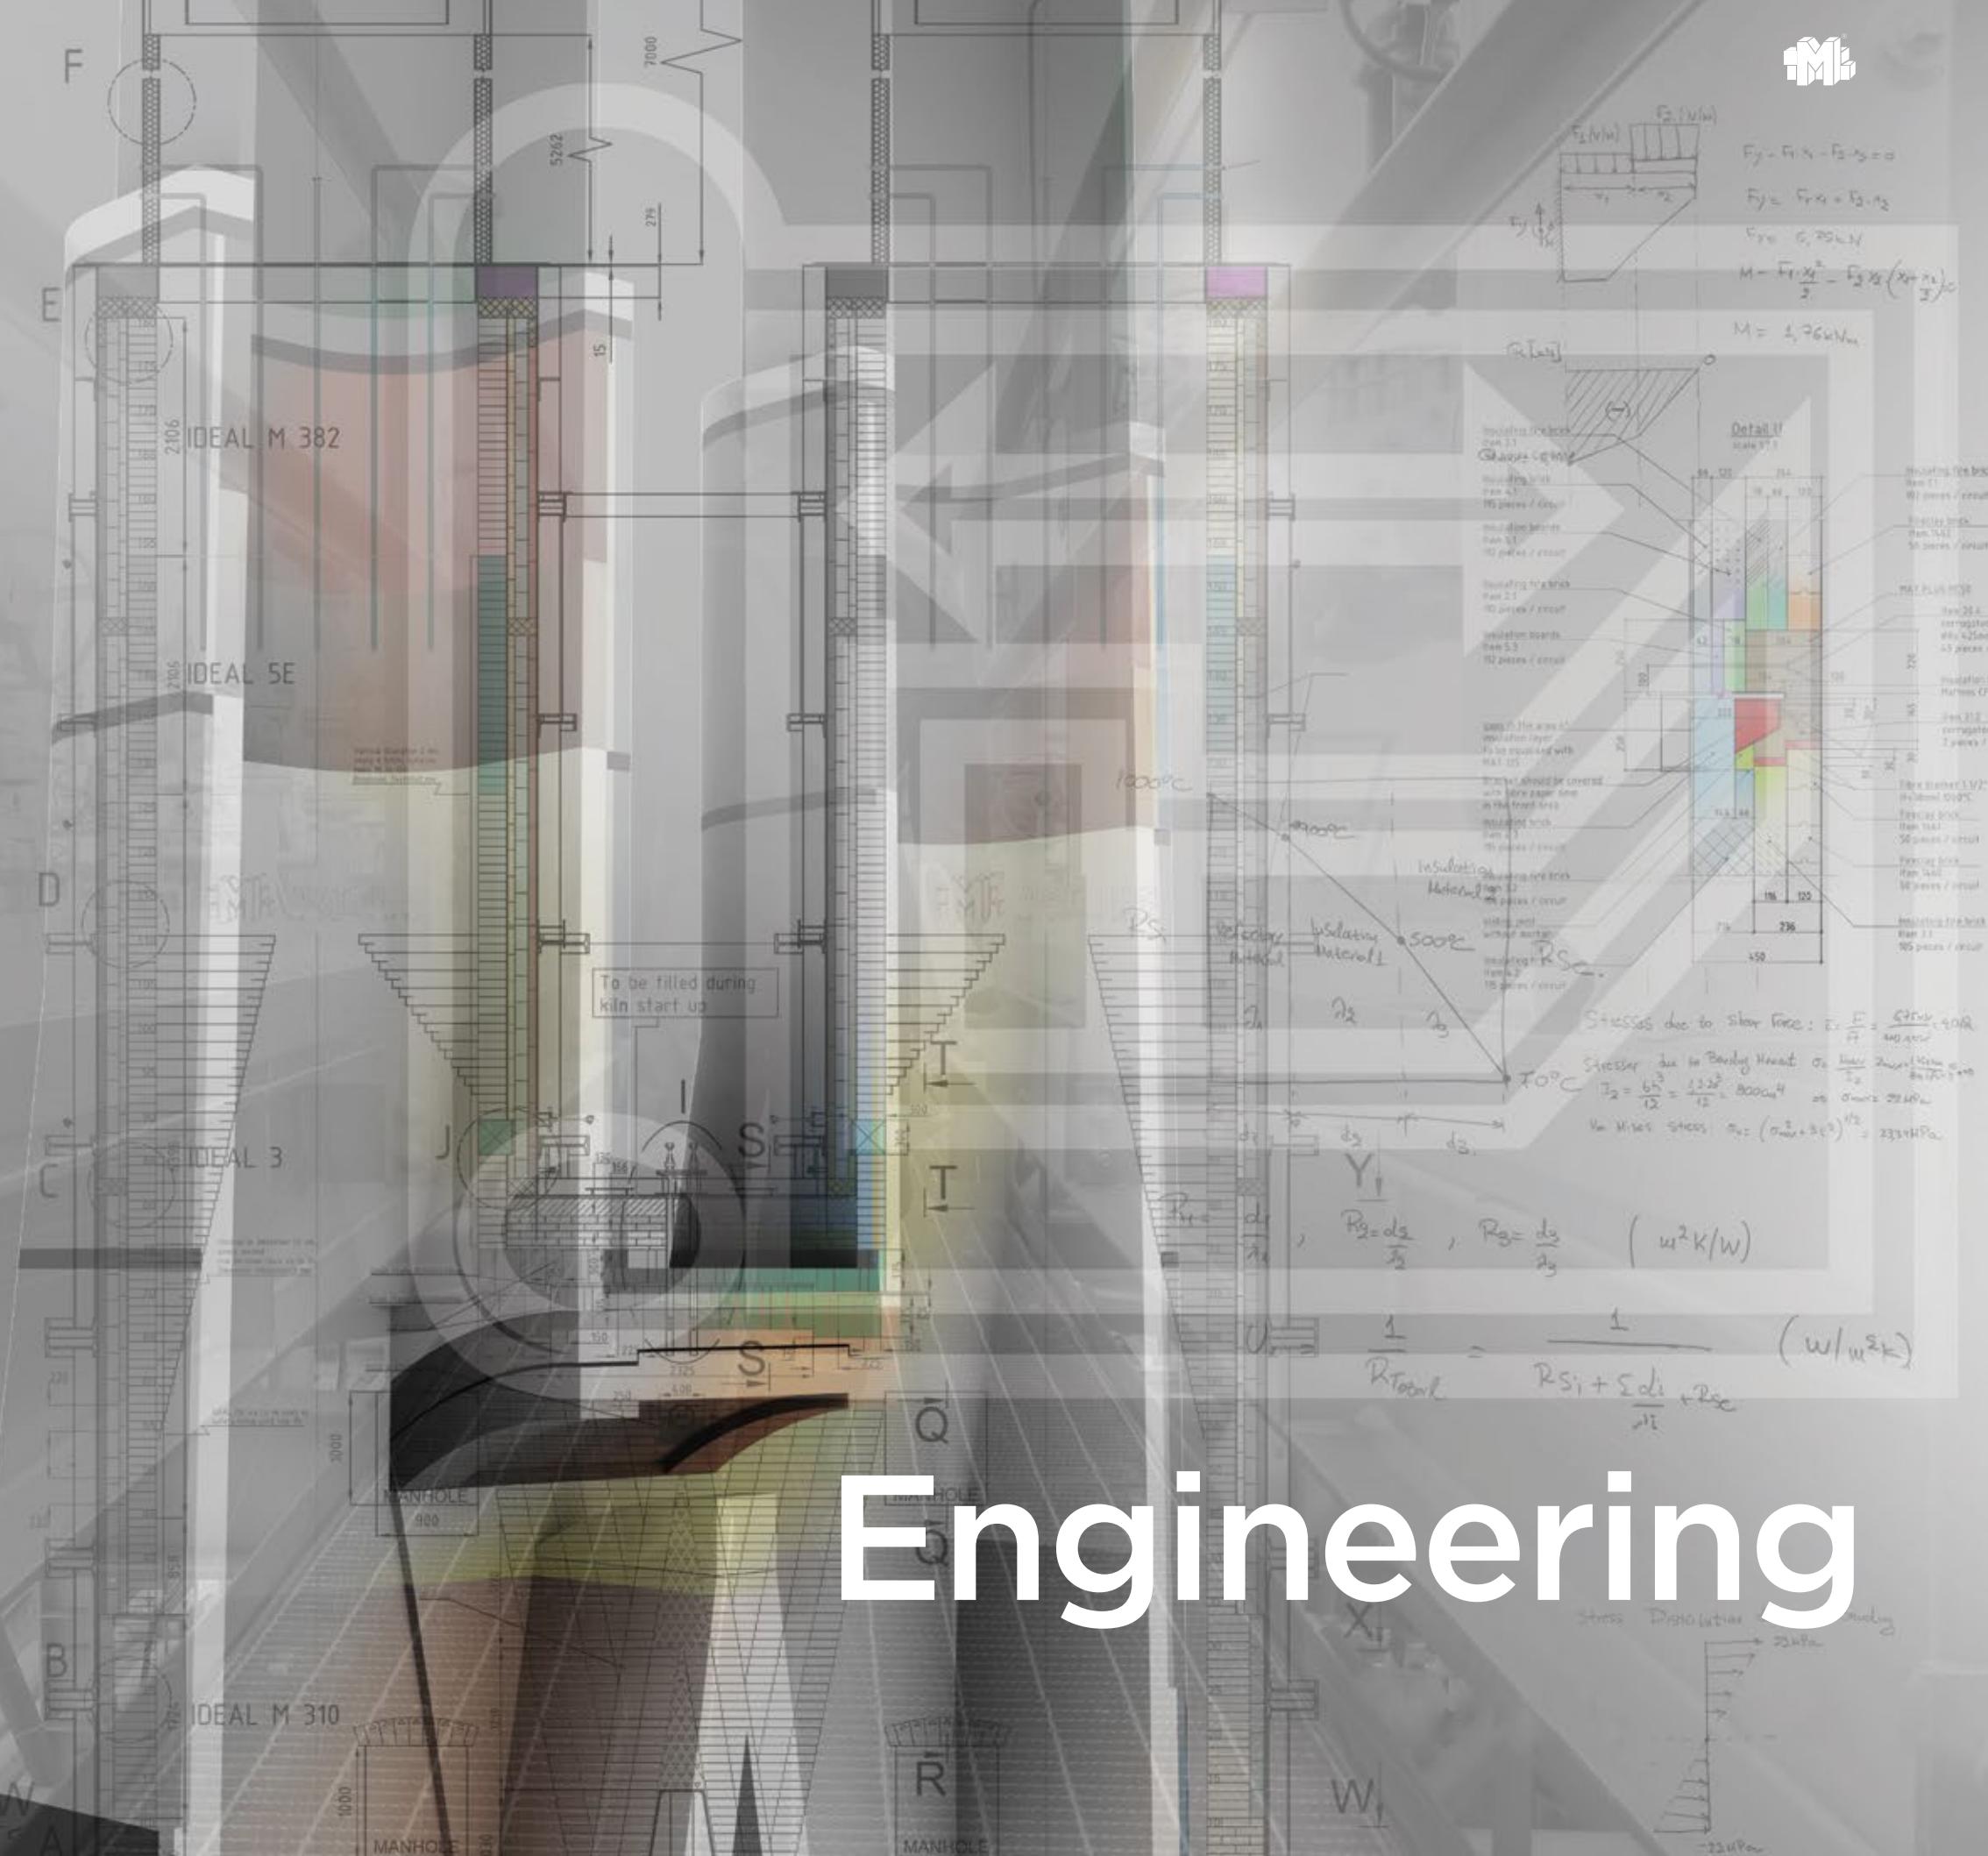

### Heat transfer calculation of refractory lining including anchors.

### Thermal Steady State Temperature (°C)

# Engineering

## High Quality Materials to Resist Heat

Each industry has different needs and each production phase is different, thus imposing a variety of challenges on the refractories lining it.

No single refractory, or refractory type, suits all applications.

That's why we offer a complete range of refractory products, tailored to each production step. Mathios Refractories develops, manufactures, and sells innovative refractory products and lining systems, which are matched to the latest technological developments and environmental regulations, and today is among the best solutions for refractories.

Our products which set performance benchmarks for the industry, include:

### SHAPED REFRactories (IDEAL)

- Fireclay Bricks
- High Alumina Bricks
- Andalusite - Mulite - Silimanite Bricks
- SiC Containing Bricks
- Acid Resistant Bricks
- Prefabricated Shapes

### UNSHAPEd REFRactories

- Dense Castables (MAT)
- Medium Cement Castables (MAT PLUS MC)
- Low Cement Castables (MAT PLUS)
- Ultra Low Cement Castables (MAT CAST, MAT MICRON)
- Medium Cement Gunning (MAT GS)
- Low Cement Gunning (MAT LG)
- Insulating Castables (MAT)
- Insulating Gunning (MAT G)
- Patching Materials (MAT RAM)
- Plastic Ramming Materials (MAT RAM)
- Refractory Mortars (MAC, MAT MOR)
- Self Flowing Low Cement Castables (MAT PLUS SF)
- Self Flowing Ultra Low Cement Castables (MAT SF)
- Nano Bonded (MAT NANO)

# Production

## Handling product challenges

In order to provide you with comprehensive refractory solutions and guarantee top performance, Mathios Refractories has strategic partnerships with selected raw material and complementary refractory material suppliers.

Our highly trained Procurement Experts and our global network of approved suppliers guarantees you qualified refractory solutions, combining top quality and proper logistics handling.

Proper methods of continuous supplier assessment are in effect so that high standards are always met.

**mathios.com**

# Procurement

## First-class installation services on-site

Many refractory problems, such as unusual wear patterns and distortion, are due to poor installation techniques. At Mathios Refractories we pride ourselves on our technical expertise, gained through the all-inclusive projects we have undertaken over the years. We are confident that only the type of refractory material required is not enough. The method of installation and the refractory start-up process play a crucial role for the equipment's performance and the running expenses.

Our Technical Specialists are certified and continuously trained with the latest application methods so that they can offer the highest standards of quality and safety within budget and schedule. The core objective of Mathios Refractories' Technical Department is to exceed safety standards and extend refractory life. Our professional experience, project management practices, and excellent workmanship result in accurate and quality services that you can count on.

# Installation

## Preserving Refractory Longevity

Mathios Refractories offers integrated maintenance services such as areas checkup, planning, scheduling, execution and project management. Our specialized Technical Sector has expertise in carrying out major maintenance services and repairs, delivering projects within budget and deadlines.

Through continuous inspections, Mathios Refractories Technical experts maintain and optimize the performance of the applied refractory materials, enhancing safety and longevity. By meticulous planning and efficient procurement we manage to execute refractory maintenance with reduced shutdown duration and confident budgeting.

# Maintenance

# Equipment

For ensuring the optimum installation and maintenance we provide a comprehensive range of state-of-the-art machinery and equipment.

## Pan Mixers

High - performance mixers suitable for all refractory unshaped materials. They homogenise the mix perfectly allowing for optimum results. Available in various engine types and batch sizes. Our Technical Experts can propose the best choice that suits your needs.

## Gunning Machines

With intensive mixing, high pressure, low rebound and less dust creation, the gunning installation technique saves time and money and should be preferred when possible. It is highly recommended for closed and hard to reach spaces. Gunning machines work well in both hot and cold conditions.

## Brick Machines

Brick Machines offer a great combination of reliable, accurate, safer and quicker refractory installation for rotary kilns. Thank to its hydraulic cylinders, the machine can be adjusted to different kiln diameters.

## Refractory Brick Cutting Machines

Achieve high productivity and accuracy in shaping new Bricks, with the Refractory Brick Cutting Machine. Designed to cut bricks of various sizes and thicknesses, both vertically and horizontally the Machine is suitable for both wet and dry cutting.

## Concrete pumps

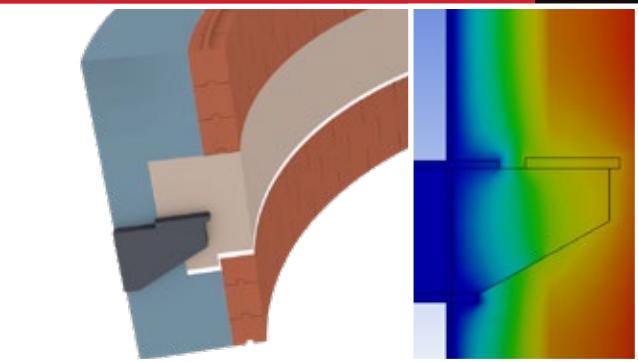

When the installation of big volumes of refractory castable is required, pump casting is recommended. Pumping ensures timely applications while minimizing the manpower required and time from mix to casting.

# Equipment

## Coal Fired Power Plants

As a core business for Mathios Refractories – Coal Fired Power plants are one of our many fields of expertise. Projects are handled on an EPPC basis that is Engineering, Production, Procurement and Construction.

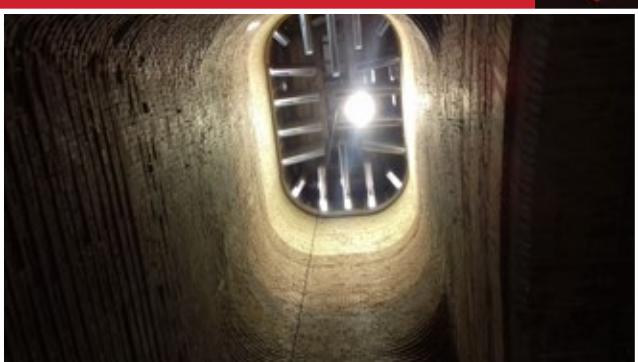

## Incinerators

Industrial, Municipal, Agricultural waste incinerators worldwide are being constructed with Mathios Refractories materials. Services offered include special engineering, material production, procurement and installation.

## Calcination Shaft Kilns

Single, double or other type of shaft kilns can be fully lined taking advantage of the Mathios Refractories Integrated Solutions; Engineering, Production, Procurement and Construction.

## Rotary Kilns

As a core business for Mathios Refractories – Rotary kilns for Cement, Alumina and Magnesia are refractory engineered and lined with Mathios' materials by Mathios' Installation Experts. With focus on long life, consumption and energy efficiency Mathios Refractories provides high quality solutions.

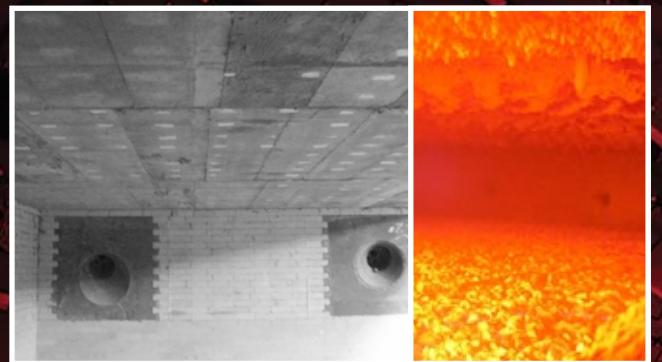

## Anode Baking Furnaces

Mathios Refractories has been serving the Aluminium industry for many decades while developing full solutions for many of its parts, both in primary production and smelters. Having accomplished unique applications in the field – Mathios Refractories Anode Baking Furnace bricks coupled with our first class installation services constitute the optimum solution for any scale project.

## Melting Furnaces

The long experience of Mathios Refractories in the Aluminium industry help us gain better understanding of the processes and the requirements of each alloy. Thus we are able to provide 360° tailor-made solutions covering the entire spectrum of the Aluminium industry requirements.

## Recycling Furnaces

Mathios Refractories provides an array of comprehensive services related to the challenging sector of recycling. Extended service life, cost saving and reliability are key characteristics of our solutions.

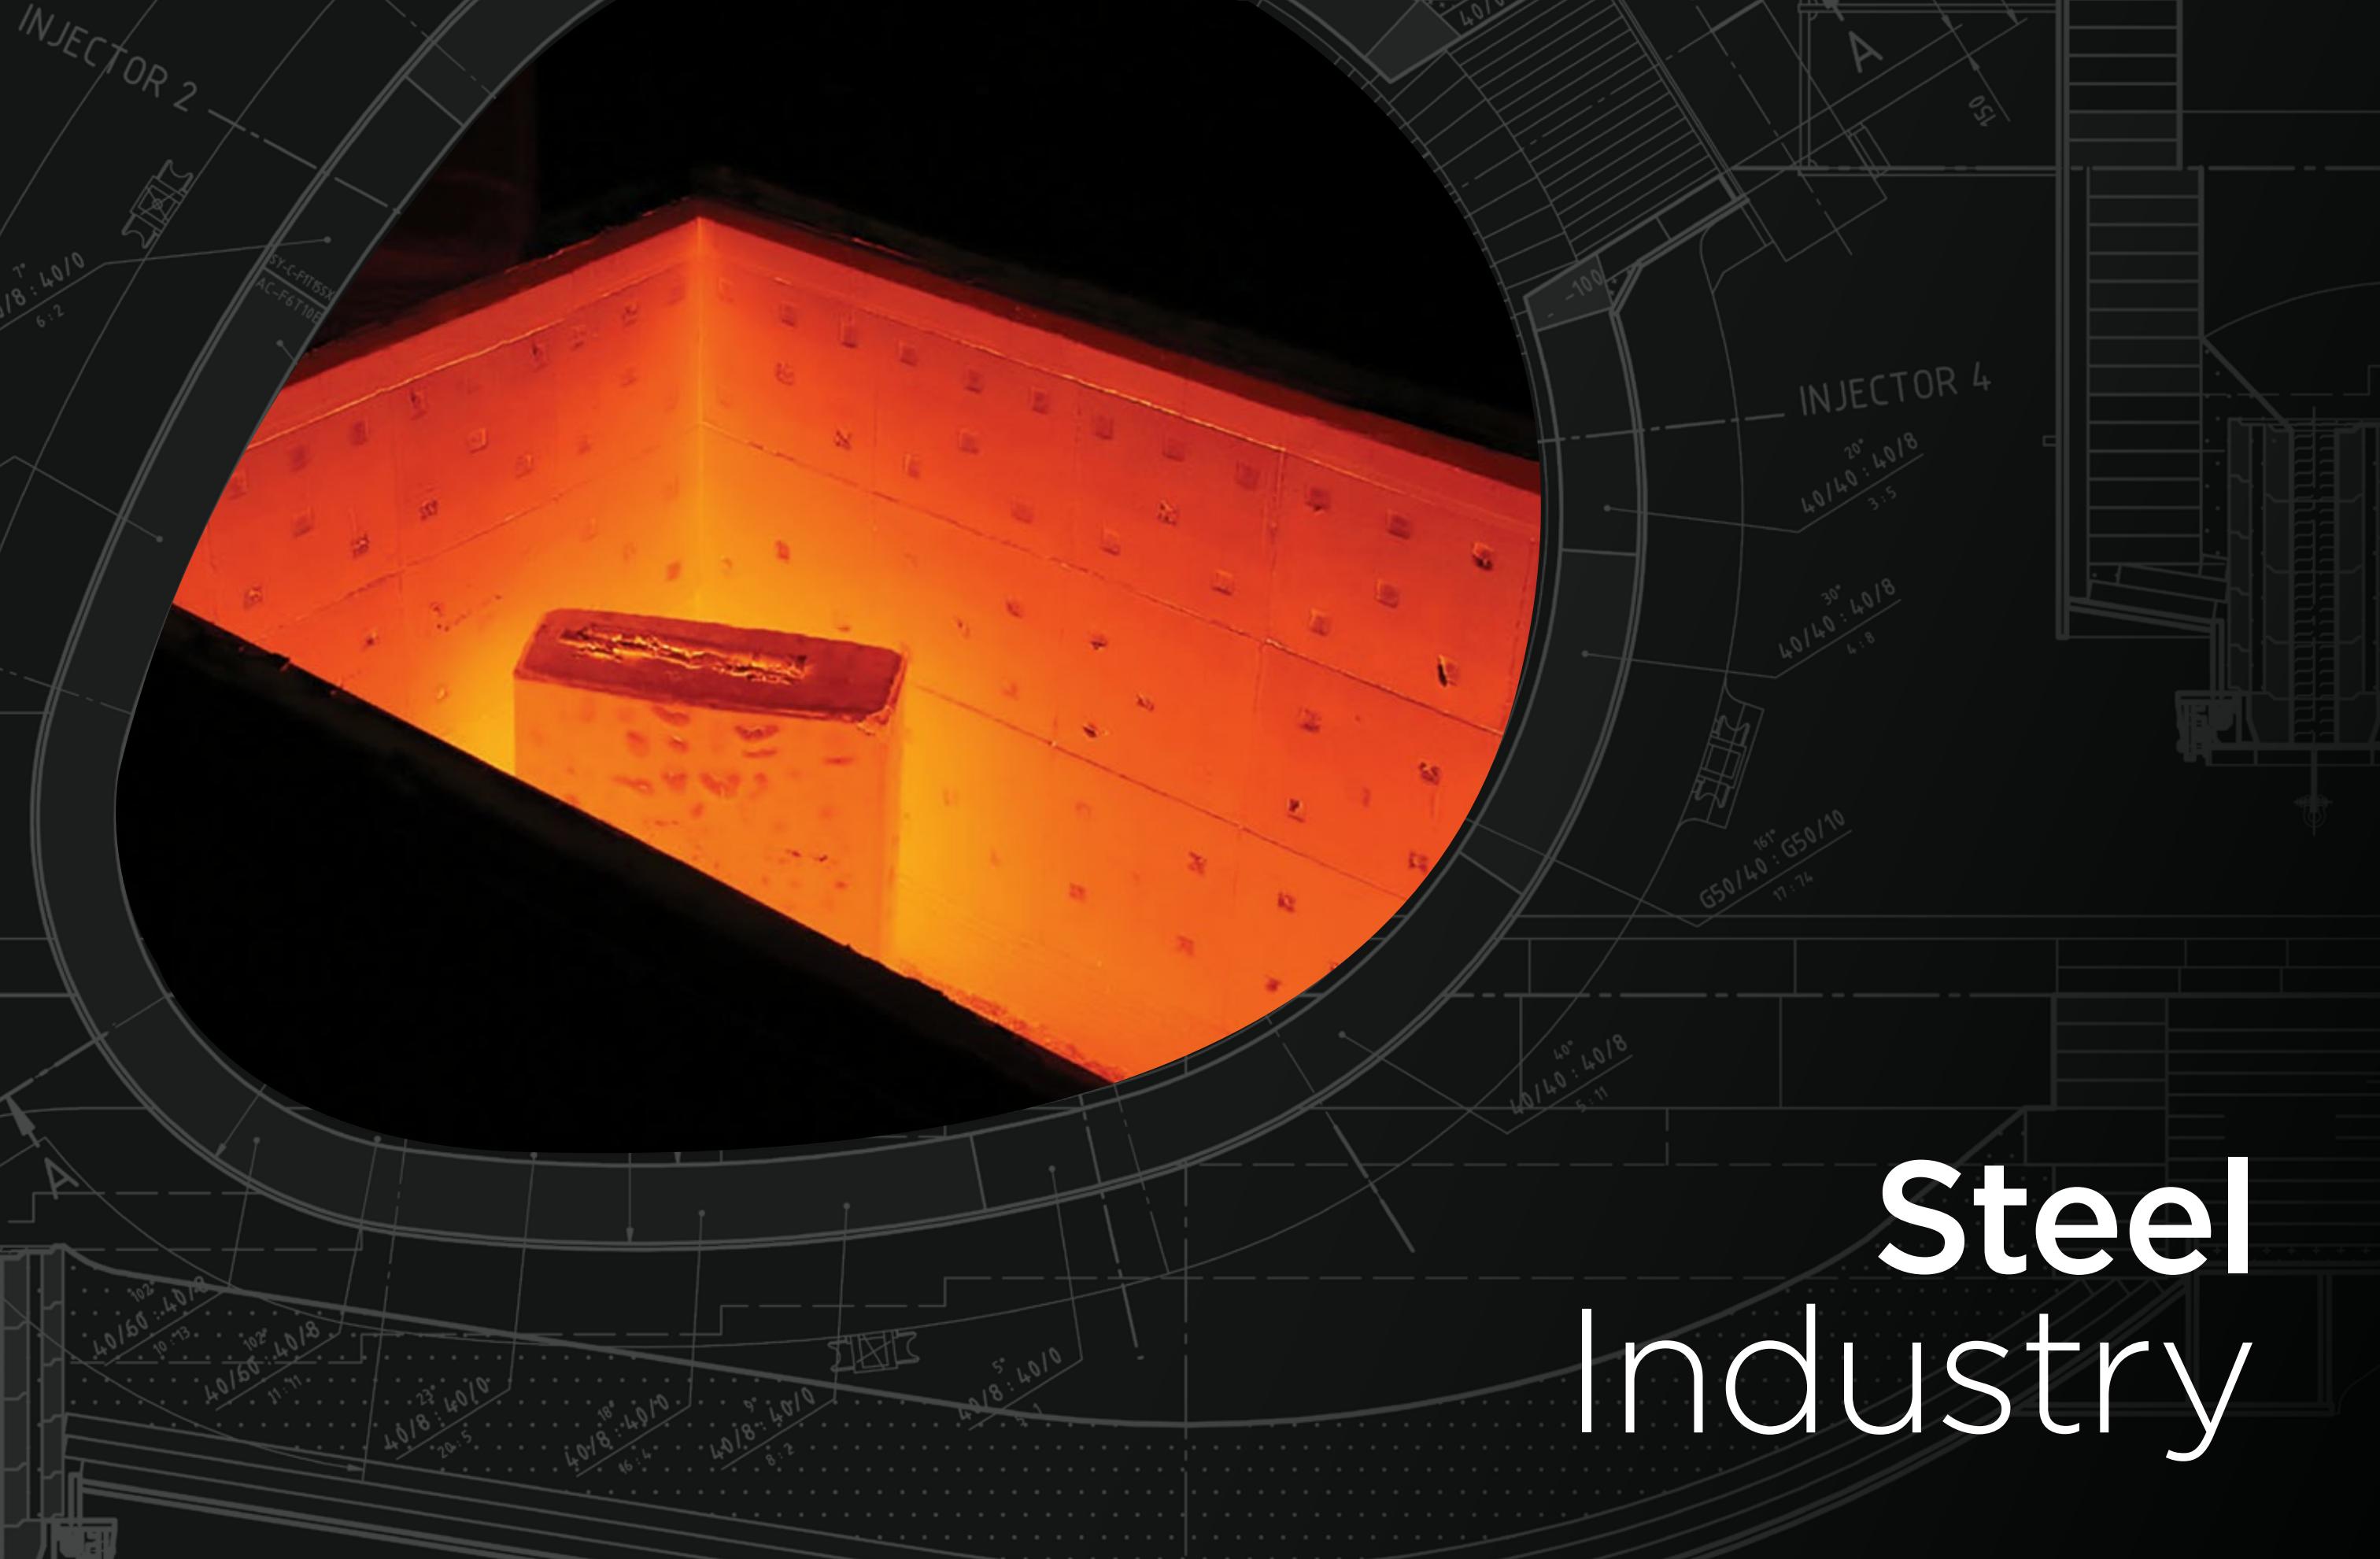

# Projects

With solid experience, proven by the numerous and successful integrated solutions in various industries across the world, Mathios Refractories is an innovative and reliable partner.

## Support Elements

MATHIOS REFRactories  
is your trusted partner when  
it comes to metallic support  
elements.

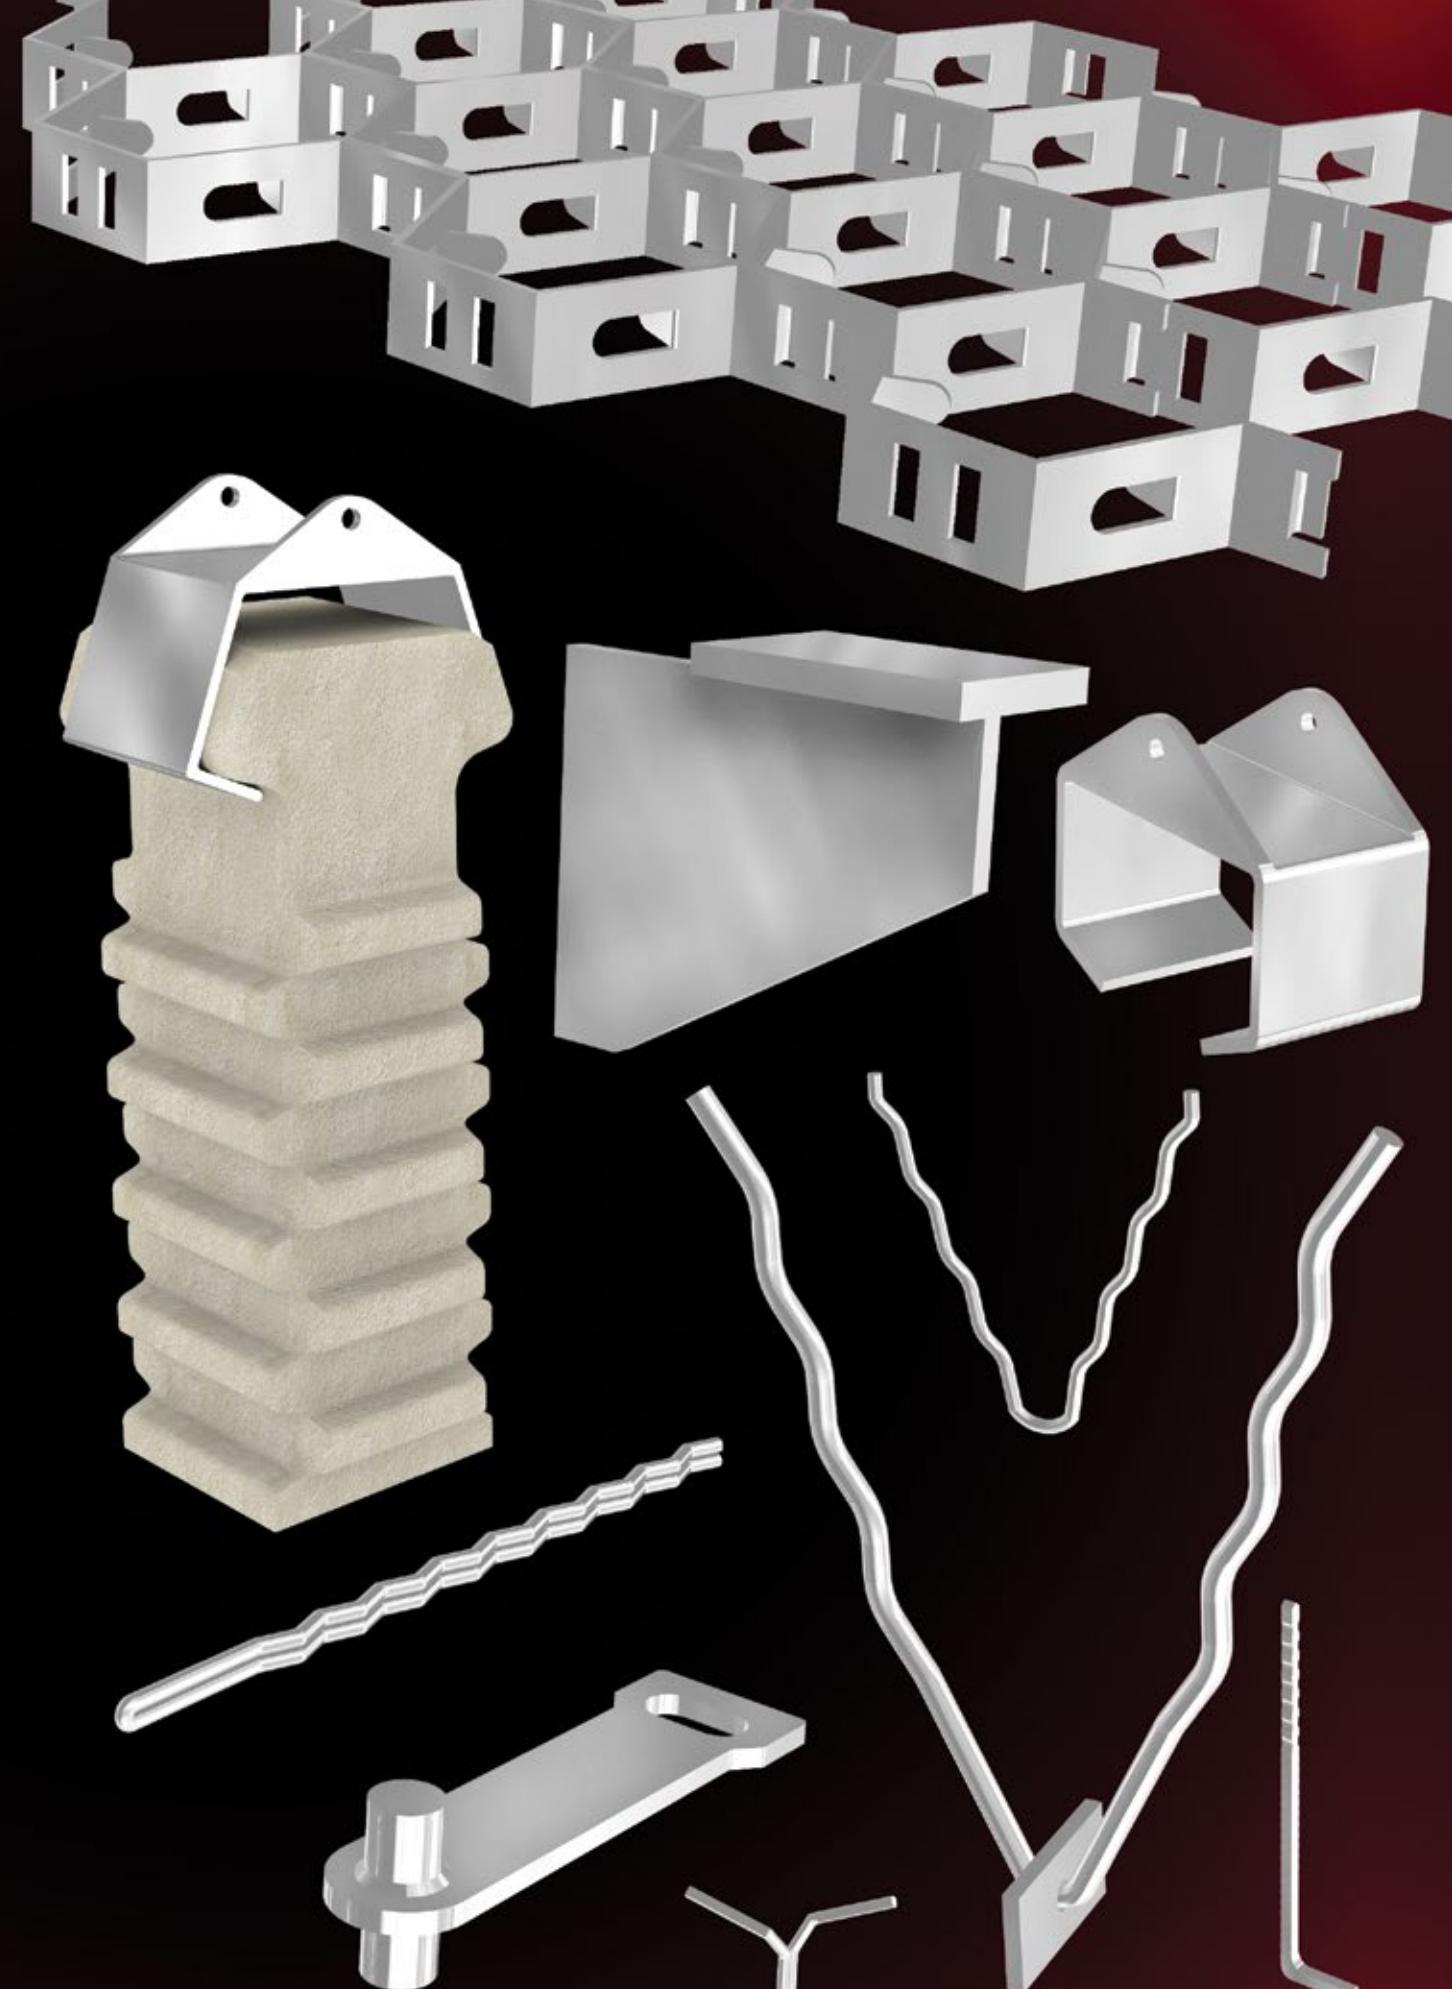

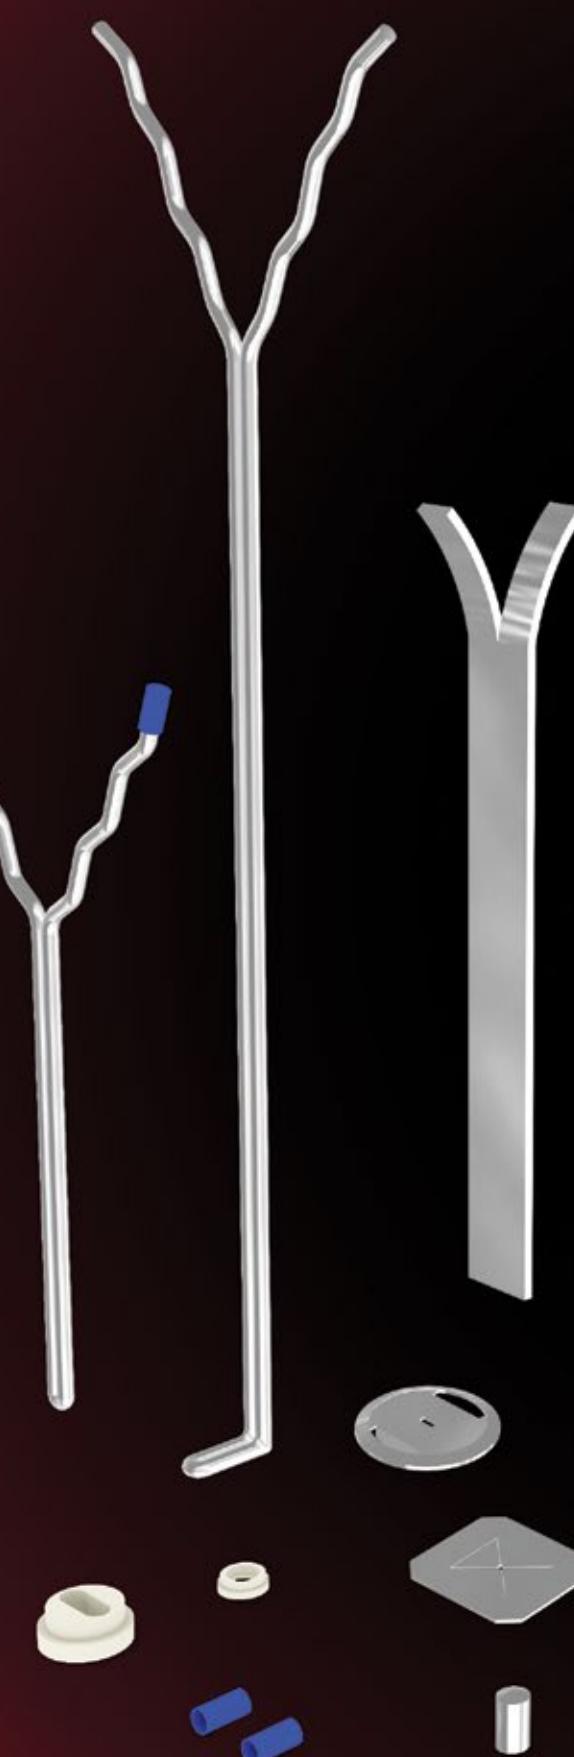

We are capable of delivering  
a vast variety of different  
metallic support elements  
such as, but not limited to,  
anchors, brackets, retainers,  
hexagonal meshes and studs  
both in shape and quality.  
Anchors can also be supplied  
with plastic caps.

If required anchors can be  
pre and / or post forming  
annealed.

## Acid - Proof Cement & Concretes

PRODUCT NAME	Density (g/cm <sup>3</sup> )	Compressive Strength (N/mm <sup>2</sup> ) (After 28 days)	Flexural Strength (N/mm <sup>2</sup> )	Tensile Strength (N/mm <sup>2</sup> )	Adhesion to. (N/mm <sup>2</sup> )		Flexibility 10 (N/mm <sup>2</sup> )		Thermal Conductivity (W/mK)	Thermal Linear Expansion (10 <sup>-6</sup> 1/K)	Thermal Resistance up to (°C)
					Ceramic	Steel Concrete					
ASPLIT ET	2.05	100	30	40	40	10	1.4		1.7	45	120
ASPLIT CN 916	1.45	60	-	-	-	-	-		1.6	-	180
MAT ACID	2	35	6	-	-	1.2	1.0		1.2	12	900
MAT ACID GS	2.15	50	-	-	-	-	-		-	-	1100

## Acid - Resistant Tiles - Bricks

PRODUCT NAME	Density (g/cm <sup>3</sup> )	Compressive Strength (N/mm <sup>2</sup> )	Water Absorption (w.t%)	Acid Solubility (% b.w)	Chemical Analysis (%)			Type of Bonding	Thermal Shock Resistance (Cycles as per EN 993-11)	Open Porosity (% b.v)
					Al <sub>2</sub> O <sub>3</sub>	SiO <sub>2</sub>				
IDEAL ACID 20	2.1	75	6.8	2.5	20	73.5		Ceramic	12	12
IDEAL ACID SUPER	2.12	65	5.5	1.2	19.5	74		Ceramic	7	11
IDEAL ACID SUPER DT	2.14	70	5.5	0.85	21.5	72		Ceramic	7	11

## The Perfect Combination

**Vermiculite** is a hydrous phyllosilicate mineral which undergoes significant expansion (exfoliation) when heated. It is very lightweight and mixes easily with other mediums. Due to its properties, Vermiculite has a remarkably wide range of applications. Low bulk density, low thermal conductivity, odor-free, chemical inertness, easy handle and fire resistance are the features that render Vermiculite a highly versatile and promising material.

Among others, **Vermiculite** can be used as **high-temperature insulating refractory material**. On top of that, when it is combined with other aggregates such as expanded shale, clay and slate produces **refractory concretes** and **insulation materials**.

**Vermiculite** has been successfully used as soil improver in Horticulture and Agriculture helping the plants to thrive.

- It increases aeration and moisture retention, saving 30-50% water.
- Through its high Cation-Exchange Capacity (CEC), Vermiculite minimizes fertilizer leaching.
- It is an excellent carrier and extender for fertilizer and pesticides and works well as packing material for bulbs and tubers.
- Vermiculite helps plants growing faster and it is ideal for transplanting, flowers arranging, newly seeded lawns and roots cutting.
- Exfoliated Vermiculite by Mathios Refractories is Asbestos free, non-toxic and environmentally safe.

**Perlite** is a form of amorphous volcanic glass with the unusual property of greatly expanding when heated sufficiently. Its unique characteristics enable its applications to extend over many industries, including construction, horticulture, industrial, and many others.

In **industrial settings**, Perlite is often used as high-temperature insulation in foundry cores, molds, and ovens, and as a crucible topping. In addition, it is commonly mixed into masonry products such as lightweight plasters, ceiling tiles and others for stability or as an insulator - but to **gardeners**, it's an essential ingredient to use.

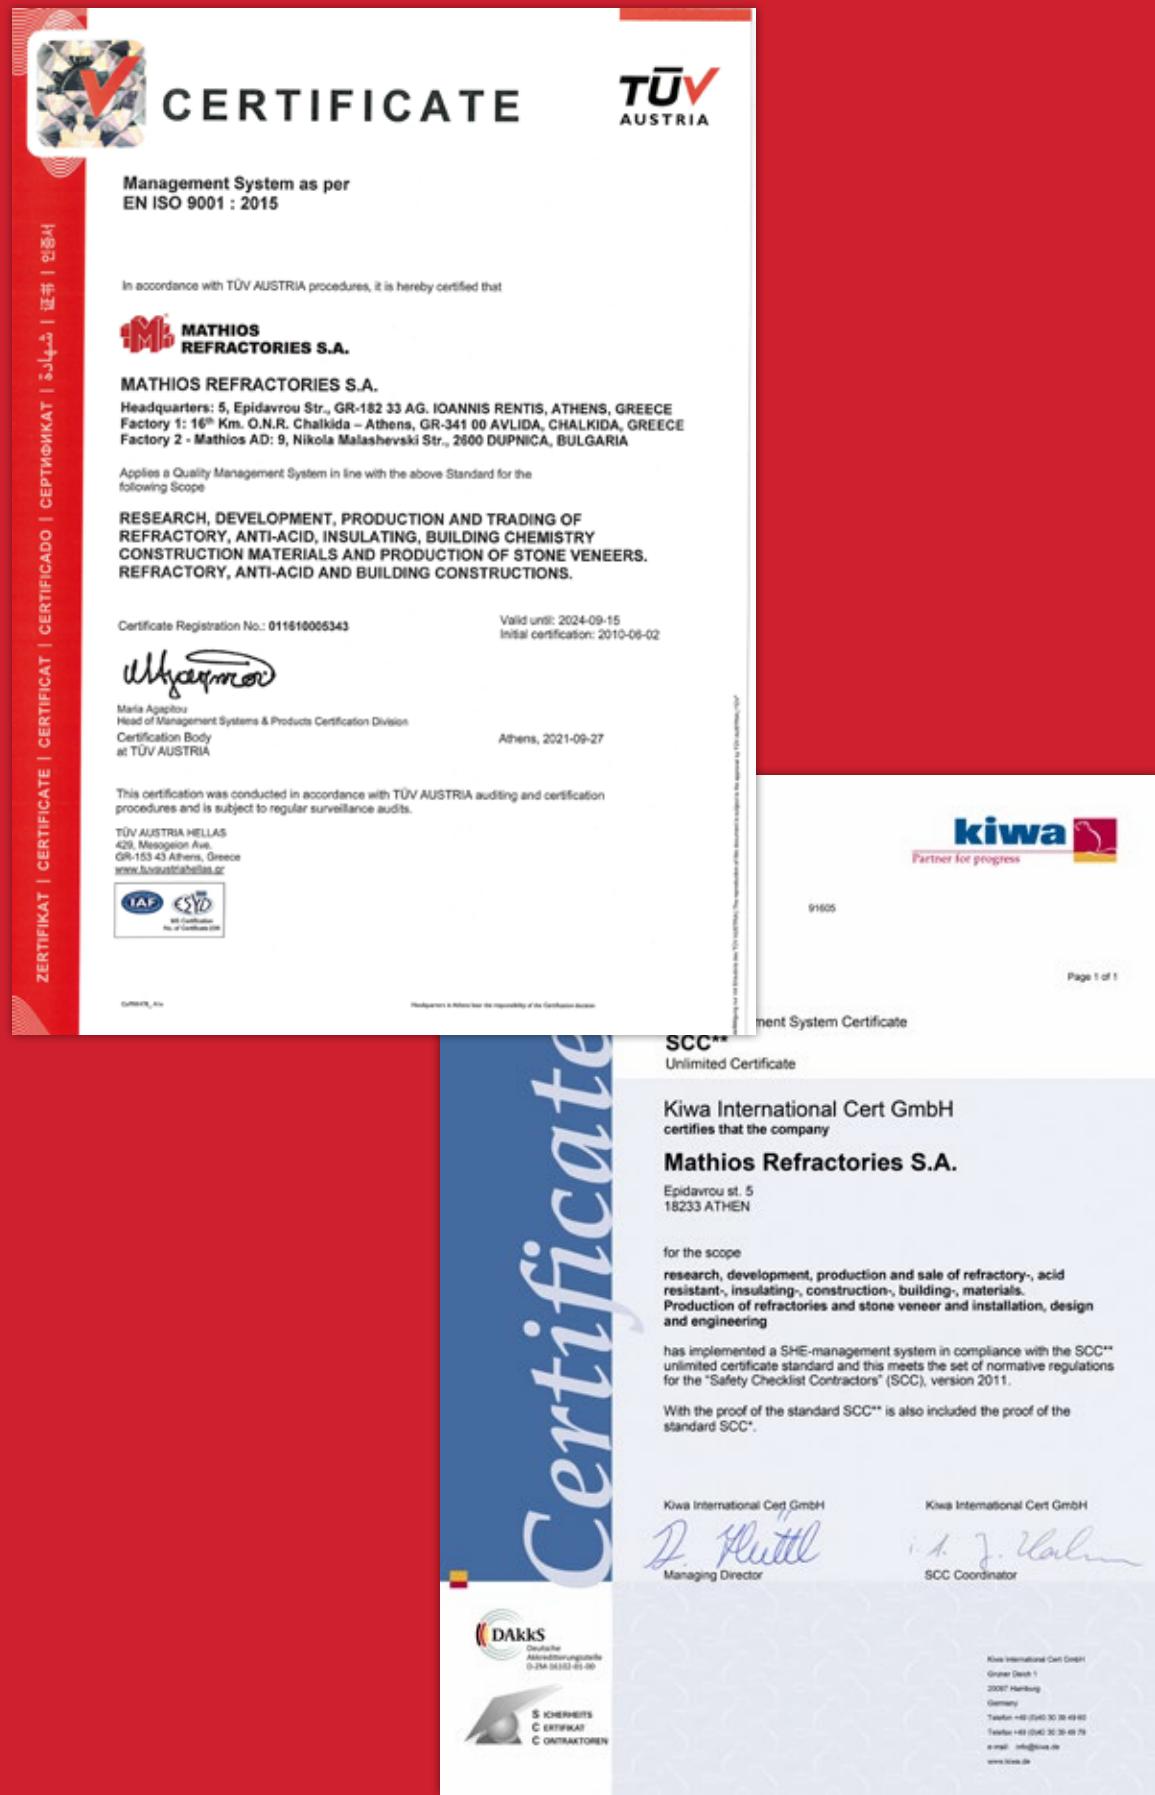

Perlite is an ideal compost additive for healthy root development. Due to its features, it helps to retain air in the fertilizer and stores nutrients and moisture. It creates the ideal balance of air and water, and minimises root damage when transplanting. It accelerates rooting and reduces the risk of fungal diseases.

- Aerates soil and promotes root growth
- Non-toxic, Clean and Disease-free
- Helps loosen heavy soils
- Prevents compaction
- Lightweight soil conditioner
- Loosens clay soil
- Improves drainage and aeration
- Helps plants thrive
- Improves soil structure
- Extremely lightweight and easy to work with
- Keeps soil workable for years
